

ONE LAYER SYSTEM

“Picking bridges” in combination with the central conveyor system will transport the full trays to the processing area.

One Layer System

Our revolutionary and patented one layer system is operational since 2008. It is especially designed to increase the picking performance per employee., and in order to limit the time between emptying the room and harvesting to a minimum ($\pm 1,5$ day). Employees walking on the floor during harvesting, so this will benefits comfort and safety of your employees. Trays will be discharged through a smart conveyor system.

Growing rooms for pinning looks like “traditional” rooms. When the first pinns appear, the compost and casing will be transported to the harvesting rooms with a special designed pulling system.
