

# MECHANICAL HARVESTING EQUIPMENT

Inclined conveyor combined with a central conveyor to transport mushroom from the growing rooms to the processing area.

## Harvesting conveyor MC.040

Our mushroom harvesting conveyor is designed around a unique lift system. One hydraulic piston, and one electrical drum motor operates the complete conveyor. Therefore it is not necessary to fit a lift system in each growing room. Because the conveyor is build like a harmonica, setting up or storing the conveyor only takes a few minutes. The conveyor is made of stainless steel. Together with the other components of our Limbraco harvesting equipment, we can offer you a complete high-production harvesting line.

Sorting table with stem removing unit, for grade and quality selection of mushrooms intended for the canning industry.
